

SKIFF / BAY BOAT SET-UP

Popular in coastal waters where anglers often target sea trout, redfish, bonefish or tarpon, skiffs can run fast in the “flats”. These boats can often include an elevated platform at the back of the boat to aid in sight fishing. Humminbird has multiple GPS, sonar and imaging combination units to fit skiffs, bay boats or flat boats of any size. Most feature a center console with room for a gimbal mounted HELIX or SOLIX Series model. To help you sneak up on your prey and hold a position, a Talon shallow water anchor can be added to the stern along with a Minn Kota trolling motor on the bow.

Recommended Humminbird Units:

SOLIX 15, 12, 10

HELIX 12, 10, 9
